DETAILED ACTION

Response to Amendment

This action is in response to the RCE/amendment filed 04/12/07.
 Claims 1, 10, 19 and 28 have been amended.

Response to Arguments

2. Applicant's arguments, see page 11, 2nd-3rd paragraphs, with respect to the rejections of claims 1, 10, 19 and 28 under 35 USC 103(a) have been fully considered and are persuasive. However, the amendment has necessitated new grounds of rejection that are not based on prior art.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 4. Claims 1-36 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Regarding independent claim 1, it recites the new limitation "the microprocessor's unprotected

Application/Control Number: 10/085,346

Art Unit: 2132

nonvolatile memory component and the protected nonvolatile memory component use physical and logical address ranges that are the same". According to the disclosure, the conditional access module (CAM) is a uniprocessor system having a single system bus connecting the microprocessor to different memory components (fig. 6A-B). Since both the protected and unprotected nonvolatile memory components use the same physical and logical address ranges, a memory address referenced by the microprocessor read/write operation from/to one memory component can be found in the other memory component. However, the disclosure fails to teach how the system bus determines which memory component a memory address is associated with. Thus, the disclosure fails to enable one skilled in the art to make and use the claimed invention. Claims 10, 19 and 28 are rejected on the same basis as claim 1. Claims that are not specifically addressed are rejected by virtue of their dependency.

Allowable Subject Matter

- 5. Subject to the above 112, 1st paragraph rejections, claims 1-36 would be allowable over the prior art of record.
- 6. The following is a statement of reasons for the indication of allowable subject matter. The limitation "the microprocessor's unprotected nonvolatile

Page 3

Art Unit: 2132

memory component and the protected nonvolatile memory component use physical and logical address ranges that are the same" has not been taught by prior art. The closest prior art, Murai (4,586,162), discloses using multiple volatile memory components having the same physical address ranges (fig. 3); however, Murai does not disclose that the memory components use the same logical address range.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh Dinh whose telephone number is 571-272-3802. The examiner can normally be reached on Mon-Fri: 10:00am-6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron can be reached on 571-272-3799. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
